11/ Apr/2025

Ref. Doctor : DR.SIVAKUMAR.MD.

MRI BRAIN

OBSERVATION: :

- Focal chronic bleed in the posterior midbrain .
- Possible chronic thrombosed internal cerebral veins is noted
- Supratentorial neuroparenchyma shows normal signal intensity pattern with normal gray-white matter differentiation. No restricted diffusion.
- Basal ganglia, internal capsule and thalami are normal.
- Ventricular system, basal cisterns and cortical sulci appear normal. No mass effect/ midline shift.
- Pituitary gland, infundibular stalk and optic chiasm are normal.
- Corpus callosum is normal in thickness and signal intensity.
- Pineal region and tectum is normal.
- Posterior fossa shows normal cerebellar hemisphere and fourth ventricle.
- Extra-cerebral spaces are normal. Both CP angles are free. Flow voids corresponding to normal intracranial vasculature noted.
- Visualized orbits and mastoids appear normal.

IMPRESSION:

- ❖ Focal chronic bleed in the posterior midbrain .
- ❖ Possible chronic thrombosed internal cerebral veins .

Suggested: - Clinical correlation.

Dr. S. Anbumalar. MD(RD), FRCR
Consultant Radiologist

Patient Id	178662	Study Date	18-11-2024
Name	ABDUL RAHUMAN	Description	DOPPLER STUDY
Age/ Sex	41 years/ M	Ref. Doctor	Dr. SIVAKUMAR, MD

DOPPLER STUDY OF CAROTID AND VERTEBRAL VESSELS

Bilateral carotid and vertebral arterial Doppler has done with 2D Grey scale; Color and Pulsed wave duplex Doppler

2D GREY SCALE

Both common carotid arteries appear normal in calibre and are tortuous in course.
Rt CCA - 0.62 mm, Lt CCA - 0.63 mm

Intimo-medial complexes are normal. (Rt - 0.03 mm, Lt - 0.07 mm).

Both CCA **do not show any evidence of plaques**, thrombus or luminal narrowing.

No thrombus seen.

Left carotid bulbs shows **smooth** calcified plaques seen .

Right carotid bulbs are normal. No demonstrable mass in the carotid sheaths on either side.

Bilateral internal and external carotid arteries are **normal** in calibre and course.

Rt ICA -- 0.55 mm, Lt ICA -- 0.44 mm.
Rt ECA -- 0.43 mm, Lt ECA -- 0.38 mm.

Bilateral vertebral arteries are normal in caliber and course.

COLOUR DOPPLER STUDY:

Bilateral CCA, ICA, ECA and vertebral arteries are showing antegrade flow with complete luminal color filling of homogenous hue.

Flow separation is preserved at bilateral carotid bulbs and proximal ICA s

No aliasing noted to suggest turbulence.

**Malar
Scans**

No. 11-2nd, Muthananthapuram Street, Old Bus Stand Backside,
KOVILPATTI. Mobile: 93858 11853

PULSED WAVE DOPPLER STUDY:

The blood flow velocity and wave patterns are normal within the vessels.

The velocity measurements (cm/sec) from spectral wave tracings are as follows

RIGHT SIDE

	Peak Systolic Velocity	End Diastolic Velocity	Resistive Index
CCA	79cms/sec	18cms/sec	0.76
ICA	64cms/sec	21cms/sec	0.67
ECA	94cms/sec	17cms/sec	0.81
VA	30cms/sec	7cms/sec	0.76

LEFT SIDE

	Peak Systolic Velocity	End Diastolic Velocity	Resistive Index
CCA	86cms/sec	20cms/sec	0.77
ICA	48cms/sec	15cms/sec	0.68
ECA	73cms/sec	10cms/sec	0.86
VA	22cms/sec	7cms/sec	0.67

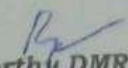

IMPRESSION:

Normal colour doppler study of the carotid and vertebral arteries in the neck.

No significant luminal narrowing or occlusion or dissection noted .

** Evidence of mild atheromatous changes seen left CCA .*

Please correlate clinically.

MR.ABDUL RAHUMAN.41Y/M

18/Nov/2024

Ref. Doctor : DR.SIVAKUMAR.MD.

MRI BRAIN

OBSERVATION: :

- **Acute hemorrhage** in the left posterior mid brain measures **2.3 x 1.2 cms** , extend from the left side subthalamic region to the left side hemi midpons.
- Early small vessel ischemia .
- No evidence of acute infarct or space occupying mass lesion.
- Minimal mucosal thickening in bilateral ethmoid sinuses.
- Supratentorial neuroparenchyma shows normal signal intensity pattern with normal gray-white matter differentiation. No restricted diffusion.
- Basal ganglia, internal capsule and thalami are normal.
- Ventricular system, basal cisterns and cortical sulci appear normal. No mass effect/ midline shift.
- Pituitary gland, infundibular stalk and optic chiasm are normal.
- Corpus callosum is normal in thickness and signal intensity.
- Pineal region and tectum is normal.
- Posterior fossa shows normal cerebellar hemisphere and fourth ventricle.
- Extra-cerebral spaces are normal. Both CP angles are free. Flow voids corresponding to normal intracranial vasculature noted.
- Visualized orbits and mastoids appear normal.

BRAIN ANGIO

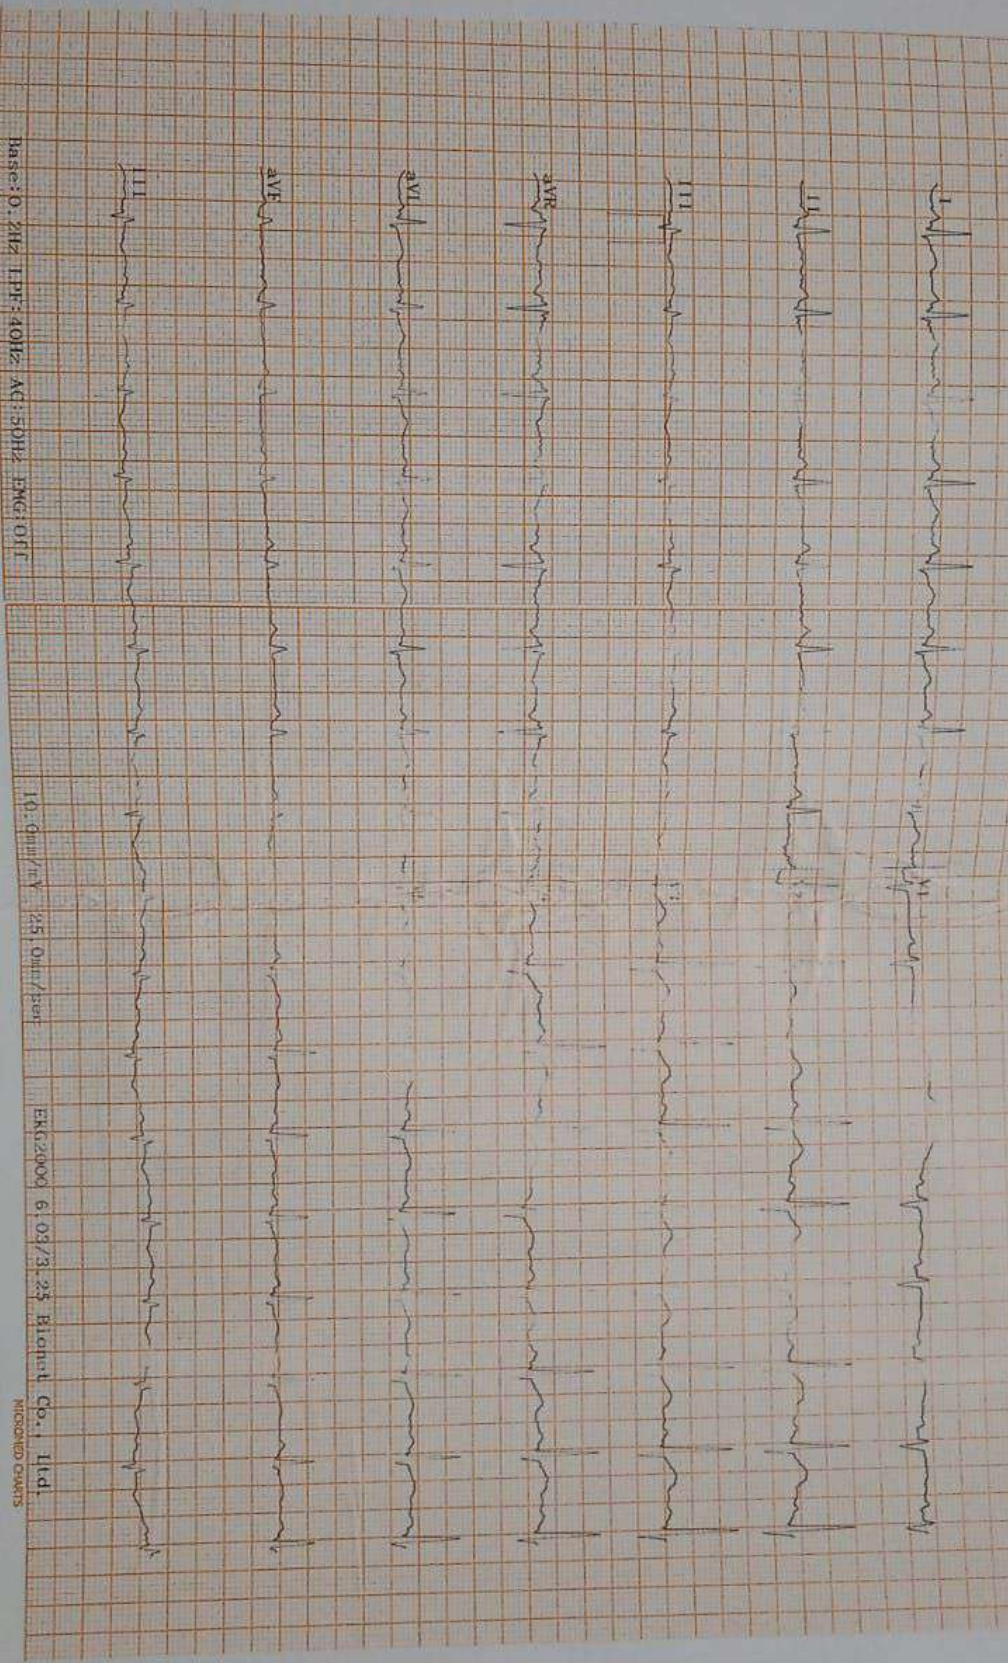

- Bilateral intracranial internal carotid arteries and their bifurcation show normal course and calibre.
- The basilar and both vertebral arteries appear normal in course and calibre.
- Anterior, middle and posterior cerebral arteries show normal flow signal intensity bilaterally.
- No evidence of any significant stenosis/thrombosis noted.
- No abnormal prominent cortical or deep cerebral vessels are noted.
- No evidence of aneurysm or vascular malformations.
